EDUCATION

University of California, Davis
B.S. in Computer Science (GPA: 3.94)

Davis, CA

Expected Graduation: June 2026

- Relevant Coursework: Object Oriented Programming, Data Structures & Algorithms, Discrete Math, Operating Systems

PROFESSIONAL EXPERIENCE

Founding Engineer @ [DeepTrust](#)

Jan. 2025 - Present

- Leading engineering for an AI-powered call security platform, building core product, ML pipelines, and ML infrastructure
- **Open source contributor** to [TerifAI](#), a real-time voice cloning AI system that replicates user voices in <10 seconds
- Built ML eval infrastructure, reducing eval cycle time by ~85% with custom scorers and a unified CLI dispatcher
- Integrated **OpenAI, ElevenLabs, and Cartesia** into a unified pipeline architecture, processing 1000+ frames per minute
- Built a scalable backend that processes real-time audio streams while maintaining <100ms latency for voice cloning ops
- Developed prompt optimization pipelines using **DSPy**, improving model accuracy by ~20% across 3 production modules

Software Engineer Intern @ Amazon Web Services (AWS)

Sept. 2025 - Dec. 2025

- Engineered testing infra processing 150K+ daily requests across EBS virtualization testing platform serving 2,000+ engineers
- Enhanced internal infrastructure with live data streaming, automated workflow triggers, and configuration diff engine
- Shipped diff tool for tracking code version drift across EBS environments currently being for on-call events across entire EBS
- Enhanced MCP server enabling AI agents to automate test orchestration/execution, cutting test creation times by 70%
- Implemented in **Java, React, Python**, and various AWS services such as **Lambda, Cloudwatch, and S3**.

Software Engineer Intern @ Meta

June 2025 - Sept. 2025

- Engineered and scaled distributed age-verification pipelines on Facebook and Instagram, handling 100K+ requests daily
- Built and integrated a new API to surface detailed age verification error reasons, increasing successful user retries by 55%
- Deployed state tracking for asynchronous listeners, enabling real-time, dynamic status updates during verification flows.
- Led A/B experiments on 300K+ users, developing features to enhance verification pipelines serving 1M+ monthly users.

Software Engineer Intern @ GEICO

June 2024 - Aug. 2024

- Developed a novel CRM tool for customer service accessibility with integration of virtual assistant/live agent transfer.
- Engineered a transformer-based virtual assistant for AI support, achieving 95% accuracy rate in query resolution
- Implemented Salesforce API integration which currently receives over 8,000 requests per day from users nationwide
- Enhanced customer service efficiency by ~13% and increased the capacity for simultaneous customer assistance by 9%.

Research Assistant @ UC Davis (PI: [Dr. Zubair Shafiq](#))

June 2023 - Present

- Research in applications of adversarial machine learning and generative models for web security and internet privacy.
- **Project 1: Co-authored** paper performing first large-scale study investigating sophisticated bot detection evasion against commercial anti-bot services. Analyzed adversarial bot fingerprints to uncover recurring inconsistencies and utilizing FGSM on deep learning models to produce methods for more accurate bot detection.
- **Project 2:** Developing an innovative technique for device fingerprinting by examining the distinctive patterns on processors induced by power viruses to generate unique fingerprints for individual devices.

Software Engineering Intern @ [Volt](#)

Sept. 2023 - Dec. 2023

- Collaborated on a cross-disciplinary team of 10 to create an application displaying cost statistics and revenue data.
- Utilized cutting-edge technologies to implement a backend powered by a **FastAPI** server in **Python** and **PostgreSQL** managing over 2000 data entries, and a **React** frontend application with **JavaScript**
- Oversaw the creation of API endpoints for functions such as returning dashboard data, specific customer data, and report generation, displaying over 1500 entries of company statistics

Co-founder/Lead Developer @ TimeSync - Scheduling App ([GitHub](#): [TimeSync](#))

Apr. 2023- Oct. 2023

- Led a team of 2 software engineers to develop a full stack application with daily development meetings
- Released application as beta, providing scheduling services to 23 users across 5 organizations
- Implemented advanced optimizations, including event descriptions, customizability, server optimization processes that increased API endpoint communication speed and data transfer speed to the database by 25%
- Accepted into StartUpDevKit 3-month accelerator program
